

ITF Rare Diseases Sweden

Accessibility remediation findings

Date: 5 May 2026

Scope: Swedish HCP website pages reviewed during the audit

Summary of findings

Prioritized technical findings prepared for remediation planning

ID	Area	Finding	Severity
SE-001	Home page CTA cards	Heading structure and link markup	Medium
SE-002	DMD pages	Slider arrow links missing accessible names	Medium
SE-003	DMD pages	Low contrast on “Titta nu” control	Medium
SE-004	Global CTA cards	Keyboard focus indicator is too subtle	Medium
SE-005	Duvyzat pages	Product image has empty alt text	Medium / Needs decision
SE-006	Global clinical images	Clinical information in images needs text alternatives	High
SE-007	Scientific updates	Heading hierarchy should be reviewed	Medium
SE-008	Mobile menu	Off-canvas controls may lack accessible names	Medium / Needs verification

HOME PAGE | CTA cards – heading structure and link markup

Area: Home page CTA cards

Severity: Medium

ISSUE

The CTA cards use an illogical heading structure. The visible CTA label “Finn ut mer” is marked up as a heading, while the actual card title is placed at a lower heading level.

WHY THIS MATTERS

Screen reader users often navigate by headings. Incorrect heading levels make the page structure harder to understand and navigate.

RECOMMENDED FIX

Use semantic markup that reflects the visual hierarchy. Use regular text/span for “Finn ut mer”, use a logical heading level for the actual card title, ensure the full card link has a clear accessible name, and hide decorative SVG arrows from assistive technologies.

DMD PAGES | Slider arrows – missing accessible names

Area: DMD pages and video/slider modules

Severity: Medium

ISSUE

The slider navigation arrows are implemented as icon-only links. The link contains only an SVG icon and no visible text or accessible name.

WHY THIS MATTERS

Screen reader users may only hear “link” with no description. Users navigating by links or buttons cannot understand whether the control moves to the next or previous slide.

RECOMMENDED FIX

Add a clear accessible name to each slider control and hide decorative SVG icons from assistive technologies.

```
<a class="elementor-button" href="#next-slide" aria-label="Next slide">
  <svg aria-hidden="true" focusable="false">...</svg>
</a>
```

DMD PAGES | “Titta nu” control – insufficient contrast

Area: DMD video/slider module

Severity: Medium

ISSUE

The foreground and background colors for the “Titta nu” control do not provide sufficient contrast. The issue is visible on the video hero/slider area.

WHY THIS MATTERS

Low contrast text can be difficult or impossible to read for users with low vision, color vision deficiencies, or users viewing the page in poor lighting conditions.

RECOMMENDED FIX

Increase the contrast between the “Titta nu” text/control and its background. Use a darker or lighter color combination that meets WCAG AA contrast requirements. For normal text, target at least 4.5:1. For large text or non-text UI components, target at least 3:1.

```
.video-button {
  color: #ffffff;
  border-color: #ffffff;
  background-color: rgba(26, 0, 81, 0.85);
}
```

GLOBAL | Focus indicator – low visibility on CTA cards

Area: CTA cards and link cards across the site

ISSUE

The CTA cards do have a visible keyboard focus indicator, but the blue outline is subtle and may be hard to notice.

Severity: Medium

Severity: Medium

WHY THIS MATTERS

Keyboard users rely on the focus indicator to understand where they are on the page. If it is too subtle, users may lose track of their position.

RECOMMENDED FIX

Make the focus indicator more visually prominent across all CTA/link card components. Use a thicker outline, strong contrast color and outline offset. Recommended color #ED6F2F.

DUVYZAT PAGES | Product image – missing descriptive alt text

Area: Product information section

Vad är Duvyzat®?

- ◆ Duvyzat® är en oral behandling som hjälper patienter med Duchennes muskeldystrofi (DMD) med bevarad gångförmåga att understödja muskelfunktionen och fördröja sjukdomsprogressionen.¹⁻⁶
- ◆ Duvyzat® är en flytande suspension som tillhandahålls i en flaska och ska administreras två gånger dagligen i en viktberoende dos med hjälp av en graderad spruta.⁷

Vem är Duvyzat® indicerat för?

- ◆ Duvyzat® är indicerat för behandling av Duchennes muskeldystrofi (DMD) hos patienter med bevarad gångförmåga från 6 års ålder som samtidigt behandlas med kortikosteroider.⁷
- ◆ Verkningsmekanismen hos Duvyzat® är oberoende av DMD-mutation.^{2,7}

ISSUE

The product image has empty alt text. Empty alt text tells screen readers to ignore the image.

WHY THIS MATTERS

This is correct for decorative images, but this image may provide useful product context because it shows the medication form, packaging and dosing syringe.

RECOMMENDED FIX

Confirm whether the image is decorative or informative. If informative, add short descriptive alt text. If all relevant information is already in nearby text, empty alt text may be acceptable.

alt="Duvyzat oral suspension with bottle, packaging and dosing syringe"

Severity: Medium / Needs decision

GLOBAL | Clinical information in images – text alternatives required

Area: Clinical tables, dosing images and monitoring guidance

ISSUE

Images that contain clinical information should be reviewed to confirm whether they have appropriate alt text or an equivalent text alternative.

WHY THIS MATTERS

Clinical and dosing information is critical content. Users who cannot see the image need access to the same information in text or structured HTML. A short alt text is not sufficient for complex tables.

RECOMMENDED FIX

Review all clinical images and classify them as decorative or informative. For informative clinical images, provide the same information as real HTML text/table. Use semantic table markup where possible.

```

<table>...</table>
```

	Vid baslinje	Månad 1				Månad 2				Månad 3	Månad 6	Kontinuerligt
		V1	V2	V3	V4	V5	V6	V7	V8			
Trombocyter	✓	✓		✓		✓	✓	✓	✓	✓	✓	Var 3:e månad
		Varannan vecka										
Triglycerider	✓									✓	✓	Var 6:e månad

Severity: High

SCIENTIFIC UPDATES | Heading hierarchy should be reviewed

Area: Scientific updates page

Severity: Medium

ISSUE

The page title should be the only h1. Main sections that sit directly under the page title should normally use h2. Card/video titles can use h3 if they are grouped under a clear h2 section, but h3/h4 should not be used just for visual styling or skipped without a parent heading.

WHY THIS MATTERS

Screen reader users often navigate by headings. If heading levels are skipped or used for styling rather than structure, the page outline becomes harder to understand.

RECOMMENDED FIX

Review the page outline and update heading levels to match the content hierarchy. Keep the visual styling separate from the semantic heading level.

```
<h1>Vitenskapelige oppdateringer</h1>
<h2>Velg innhold</h2>
<h3>From clinical trials to clinical practice</h3>
```

MOBILE MENU | Off-canvas controls may lack accessible names

Affected area: Elementor mobile/off-canvas menu controls

Severity: Medium / Needs verification

ISSUE

If the off-canvas menu open/close controls are focusable and do not have visible text or an aria-label, their purpose may not be exposed to assistive technologies.

WHY THIS MATTERS

Screen reader and keyboard users need clear names for menu controls so they can open and close navigation reliably.

RECOMMENDED FIX

Verify the mobile menu controls. Add accessible names such as “Open menu” and “Close menu” if the controls are exposed as links/buttons.

```
<button aria-label="Open menu">...</button>  
<button aria-label="Close menu">...</button>
```
